

RAYZ BARBERS

Product Requirements Document — Online Booking System

1. Overview

A booking website for Rayz Barbers that lets customers view services, pick a barber and time slot, and request an appointment. Every booking must be **manually approved by the barber** before it's confirmed. Customers can choose to pay online at the time of booking, or pay cash in person after the barber approves.

Goal: Reduce no-shows and back-and-forth DMs/calls, while keeping the barber in control of their schedule.

2. Brand & Visual Direction

Pulled from the Rayz Barbers logo:

Element	Value
Primary background	Black #000000
Primary text / surfaces	White #FFFFFF
Accent / CTA colour	Gold #C99A3C (approx — sample exact hex from logo file)
Typography feel	Bold, condensed sans-serif headings (matches "RAYZ" wordmark); clean simple sans for body
Tone	Premium, modern barbershop — minimal, confident, not cluttered

Logo files to be supplied (black background + white background versions).

3. User Roles

- **Customer** — books an appointment, no account required to browse, contact details needed to book
- **Barber (Admin)** — approves/declines bookings, manages availability, sees schedule

4. Core User Flow (Customer)

1. **Landing Page** → sees shop branding, intro, services, gallery, location, CTA "Book Now"
2. **Select Service** (e.g. Skin Fade, Beard Trim, Cut & Beard)

3. **Select Barber** (if multiple barbers — optional for v1 if it's just one)
4. **Select Date & Time** from available slots
5. **Choose Payment Method** — pay online now (card) or pay cash in person
6. **Enter Contact Details** (name, phone, email)
7. **Submit Request** → booking status = "Pending Approval"
8. Customer receives confirmation: "Your request has been sent, you'll be notified once approved"
9. **Barber Approves or Declines** — if approved, slot locked in and payment captured if paid online; if declined, customer notified and invited to pick a new time
10. Reminder notification sent ahead of appointment (e.g. 24hrs before)

5. Core Flow (Barber / Admin)

Simple dashboard showing:

- Pending requests (needs action)
- Upcoming approved bookings
- Calendar/availability management (set working hours, block off days)

One-tap **Approve** / **Decline** per request. Barber can see whether the customer paid online or is paying cash.

6. Landing Page Requirements

- Hero section with logo, tagline, "Book Now" button
- Services list with prices & duration
- Short "About" section
- Photo gallery (cuts / shop interior)
- Location + opening hours + map
- Contact info (phone / Instagram / WhatsApp)
- Sticky "Book Now" CTA on scroll

7. Booking Statuses

Status	Meaning
Pending	Submitted, awaiting barber approval
Approved	Confirmed appointment
Declined	Barber rejected — customer can rebook
Cancelled	Cancelled by customer or barber
Completed	Appointment happened

8. Payment

- **Pay Online:** card payment collected at booking, only actually charged once barber approves (or held/authorised then captured on approval)
- **Pay Cash:** no payment collected online, customer pays in shop after service
- Clear labelling at every step showing which option was chosen

9. Notifications

- Booking submitted (customer)
- Booking approved / declined (customer)
- New booking request (barber)
- Appointment reminder (customer, 24hrs before)

Email as MVP; SMS/WhatsApp as stretch goal.

10. Out of Scope (v1)

- Multi-location support
- Loyalty/rewards program
- In-app messaging/chat between barber and customer
- Recurring/auto-rebooking

11. Success Metrics

- % of bookings approved vs declined

- Reduction in no-shows
- Time from request → approval
- Booking completion rate (started booking → submitted)

12. Notes for Design (Claude Design)

- Logo assets to be uploaded separately for exact colour sampling and placement
- Prioritise a fast, minimal booking flow — as few taps as possible
- Mobile-first, since most customers will book from Instagram/phone
